

Working Prototype Known Problems Report
Tavern Cellar - Tavern Labs
6.5.16

General:

- The sorting functions on the index page are not functional.
- The separate columns for New and Top Brews do not currently contain different content.
- Note that the Feedback and About buttons currently do nothing.
- Currently the only way to log out is by going to the login page (redirects to profile, where there is a logout link)
- Not all styling on all pages is complete
- The home page occasionally cuts off “brews” when the list is full and the window is not a normal shape/size
- Validation errors for forms are not appearing due to Polymer interfering with WTForms, and these instances are described below. In most cases, the form will correctly not submit and the form will clear (redirected to the same page), even though no error message appears.

Browse:

This feature is not yet ready and will be included in subsequent release.

Edit:

- Going to the Edit page from a SRD page will clear the SRD's assigned tags.
- Subsequent release will automatically populate the form from the existing contents of the database

SRD Pages:

The voting and discussions features are not yet ready and will be included in a subsequent release.

Submit:

- Validation errors do not appear, leaving a field blank doesn't show a “requires field” error.

Login, Signup, Authentication:

- Validation errors do not appear, leaving email blank doesn't show a “requires email” error.
- Email confirmations are not sent because the Gmail SMTP server rejects our app as “unsafe” - as a result, we automatically confirm users
- Admin accounts exist; however, there is no way to request admin privileges when creating an account (for now it can only be done manually by a developer) and as of yet there are no special actions that are only available to admins

User Profiles:

- The only way to reach your own profile is by going to “Login” again.
- The only way to reach other users’ profiles is to type the URL (/user/<username>).
- Validation errors do not appear on editing profiles, so entering a wrong old password when resetting your password doesn’t show an “invalid password” message. Since this form doesn’t require you to fill in all fields, this is the only case where it will also still redirect normally, updating any other field you edited.

Live Website:

- The live site has all of the above problems in addition to the following:
- Submitting a file will result in a 500 error from the server but the entry will appear on the index page.
- Going to a SRD page and attempting to view the PDF will result in a 404 error as the file is not present.
- The tags assigned to a SRD do not appear
- Flexbox display of tiles on home page is incorrect (is compressed and cuts off tiles)
- Clicking Login does not direct a user to their user page.
